

# The Best of Both Worlds

Get the power of cloud productivity while ensuring that your on-site apps and data are under control

Many small businesses today are focused on providing the flexibility and freedom their employees need to do business anywhere—whether accessing the latest data on a customer visit or quickly reviewing a sales proposal while at the kids' soccer game. At the same time, businesses need to ensure that their IT environment is protected and under control, providing the peace of mind that everything from mobile devices to on-site servers are well-managed and secure.

Together, Office 365 and Windows Server 2012 offer the best of both worlds—combining the power of cloud productivity with the peace of mind of knowing your on-site data and apps are under control.

## Flexibility & Simplicity for Your Small Business

The combination of Office 365 Small Business Premium and Windows Server 2012 Essentials offers a great balance of flexibility and simplicity for small businesses with fewer than 25 employees.

- Use Office 365 cloud-based email, plus file sharing and HD video conferencing, all working seamlessly with your familiar and always up-to-date Office apps.
- Provide fast, easy remote and mobile access to applications and data. Office 365 ensures your employees can sign in to Office and email—and their latest documents will be just as they left them.
- With Office 365, you enjoy a predictable and affordable monthly cost for best-in-class productivity tools.
- With Windows Server 2012 Essentials, you can keep sensitive data on-site when needed, and locally host business applications, like accounting and CRM.
- Use a centralized dashboard in Windows Server Essentials to manage PCs and devices—and know that your data is further protected with daily, automatic backup of every computer on your network.

# Why better together?

With Office 365 and Windows Server 2012, your organization can get the best of both worlds—the power of cloud productivity, combined with the control you need for your on-site data and applications.

## About Office 365

Office 365 brings together familiar Microsoft Office desktop applications with business-class email, shared calendars, instant messaging (IM), video conferencing, and file sharing in a cloud-based service.

- Bring together the familiar Office apps with cloud services like email, file sharing, & HD videoconferencing
- Use Office across your devices—PC, Mac, tablet, smartphone—and know it's always up-to-date
- Get robust security with automatic data backup, strict privacy policy, and always up-to-date malware protection
- Use enterprise-quality tools at an affordable price and no upfront infrastructure investment
- Rely on a financially-backed, 99.9 percent uptime guarantee.

## About Windows Server 2012 Essentials

Windows Server 2012 Essentials offers a simple and flexible server solution that helps protect your business data while enabling access to the applications your people need from almost anywhere.

- Get the peace of mind that your employees' devices are well-managed through a simple IT dashboard designed to easily handle common tasks and address issues before they occur
- Access all your files and apps from virtually any location, just as if you were sitting in your office
- Protect your data with daily, automatic backup of the server and the computers and devices on your network
- Simplify your path to the cloud with centralized administration of cloud services and on-premises applications.
